

HTML3b: CSS Modularity - Part II

Requirements

Write the CSS necessary to render the following components, following the instructions in [Part I](#). Use the given [starter code](#).

Important: Do not modify the HTML other than to add ids and classes.

1. horizontally spaced
2. vertically spaced
3. horizontal list
4. buttons
5. navigation
6. pagination
7. comment stream
8. tabs

Style the given HTML to match the following screenshot. It doesn't need to be pixel perfect (just eyeball it) but it should be *close*, with color, font, layout, and spacing properly accounted for.

6. Horizontally Spaced

Center multiple arbitrary elements horizontally, with padding.

Works with different HTML...

7. Vertically Spaced

Center an element arbitrary elements vertically, with padding.

Works with different HTML...

8. Horizontal List

Make the list items horizontal instead of vertical.

ReadyFireAim

9. Buttons

Create a set of different-sized buttons.

Should work with both <a>, <button>, and <submit> elements.

10. Navigation

Create a navigation menu with links that are highlighted on hover.

11. Pagination

Style a pagination control for navigating through pages of search results.

12. Comment Stream

Style a stream of user comments.

13. Tabs

Create styles for a tabbed content control. There should be an active tab that is styled to appear in the foreground.
